“When it comes
to great bread, let
time do the work.”

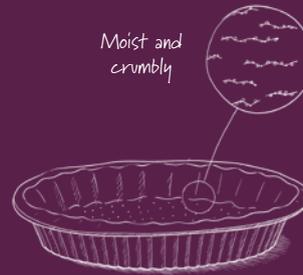

Making bread with an airy, tender crumb is done by orientating and aligning the gluten to create a strong elastic network. This bread maker does just that by knowing the right balance between working the gluten and allowing it time to rest and rise.

And because everybody likes fresh bread, the clever team at Sage have designed it so you can program your loaf to be ready when you are.

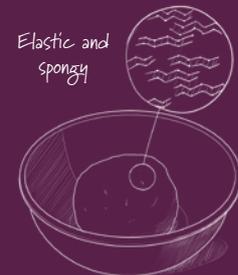

Tightening your glutens; the key to perfect pastry and dough.

Flour is a pretty intriguing and versatile ingredient. It is quite incredible when you think about it, how foods with such dramatically different textures like crumbly shortbread, compared with a fluffy croissant, a quiche crust or a bread roll, all build their structure using flour. While what ingredients you mix with flour plays a part, the order in which you add them and the way you combine them is far more important. It's this that determines how much the glutens, the proteins that give dough its elasticity, are developed.

The structure of any dough is essentially determined by how liquids (water or milk) and flour react to one another. The length of time the dough is kneaded as well as the amount of time the gluten in the flour is in contact with liquid is what determines the elasticity of the glutens and hence the dough. Bread dough needs wet flour, heavy kneading and a decent proving time, to maximise its elasticity. But for a crisp, flaky pastry, the opposite is true and gluten development needs to be kept to a minimum. It means essentially inverting the mixing process by adding the fat (room temperature butter works best) to the flour before any liquid to form a moisture barrier around the glutens.

Pastry has tight, unattached glutens encased in butter

Dough has elastic, entwined glutens

But the other secret to truly great pastry is temperature. Keeping the pastry mix cool is critical to prevent the glutens from developing before baking, and also helps prevent cracking.

TIP

There are three simple but important steps to minimising heat transfer while making pastry. First, pre-cool all the key equipment, like the mixing bowl, the dough hook, the rolling pin and the pastry board in the fridge for half an hour or more before you start. Second, once you've finished mixing and are ready to mould the dough, do so using only your fingertips so you minimise heat transfer from your palms. Finally, when resting the finished pastry dough, keep it in the freezer for about half an hour before baking. A rested, pre-cooled pastry will evaporate significantly less while baking which reduces the chance of shrinking and cracking.

Controlling temperature helps keep your glutens tight and tighter glutens make a world of difference to taste and texture.

Traditional White Bread

Almost any BASIC recipe, including the ones on the following pages, can be modified for use with the BASIC RAPID setting.

Best results are achieved by using the longer settings, producing a loaf with optimal texture. If using the RAPID settings on specified recipes in this section, reduce salt by $\frac{1}{4}$ teaspoon and increase yeast by $\frac{1}{4}$ teaspoon. This adjustment is suitable for all recipes.

Unlike the BASIC setting, the BASIC RAPID setting reduces all three of the 'rise' phases, shortening the entire cycle time by approximately an hour. For this reason, instant yeast (also known as quick-rise yeast, rapid-rise yeast, fast-rising yeast, fast-acting yeast or bread machine yeast) must be used with this setting or the bread will not rise and bake properly.

Almost any BASIC recipe can be modified for use with the BASIC RAPID setting by replacing active dry yeast with an equal or larger amount of instant yeast.

Bread improver (optional) is not essential, however it will help strengthen the crumb structure of the bread resulting in a loaf that is lighter in texture and higher in volume, more stable and with enhanced keeping qualities.

Traditional White Bread

Method

1. Ensure the collapsible kneading blade is in the upright position before adding ingredients.
 2. Wipe spills from outside of bread pan.
 3. Insert the bread pan into position in the baking chamber and close the lid.
 4. Press SELECT to access the setting as listed in the following recipes.
 5. Press LOAF SIZE to select 1.25kg, 1kg, 0.75kg or 0.5kg if required.
 6. Press CRUST to select DARK, MEDIUM, LIGHT or RAPID if required.
 7. Press START | PAUSE to commence operation.
 8. At the end of the setting, press STOP.
 9. Remove bread from bread machine and bread pan. Cool bread on rack.

Maple Pecan & Brazil Nut Butter

250g pecans
75g Brazil nuts
60ml pure maple syrup
1 tablespoon macadamia oil or rice bran oil
Pinch of ground cinnamon
Pinch of salt

1. Preheat oven to 160°C no fan (140°C fan-assisted). Line a large baking tray with parchment paper. In a separate bowl, toss pecans and brazil nuts in maple syrup, and spread out evenly on tray. Bake for 10 minutes or until lightly roasted, stirring half way through. Set aside to cool for 10 minutes.
2. Place the nuts, oil, cinnamon and salt into blender jug and secure lid. Mill for 1 minute, or until mixture is almost smooth, using tamper to push ingredients down if required. Turn dial down to blend for 10-15 seconds to finish.
3. Store in a clean, airtight container or jar in the fridge for up to 1 month.

Almond, Chia & Linseed Butter

450g raw almonds
2 tablespoons chia seeds
2 tablespoons linseeds
2 tablespoons macadamia or rice bran oil

1. Preheat oven to 200°C no fan (180°C fan-assisted). Place almonds on a baking tray. Bake for 8-10 minutes or until lightly roasted. Set aside to cool for 10 minutes.
2. Place almonds, chia seeds, linseed and oil into blender jug and secure lid. Mill for 1 minute, or until mixture is almost smooth, using tamper to push ingredients down if required. Turn dial down to blend for 10-15 seconds to finish.
3. Store in a clean, airtight container or jar in the fridge for up to 1 month.

Sweet Bread

Most of the recipes in this section have the addition of nuts, chocolate, sultanas or other flavour enhancing ingredients. Some of the recipes include egg or milk in place of water to produce a richer flavoured bread with better keeping qualities. All the recipes in this section are designed for the SWEET setting.

Selection of CRUST and the RAPID function is not available on this setting.

Bread improver is not essential, however it will help strengthen the crumb structure of the bread resulting in a loaf that is lighter in texture and higher in volume, more stable and with enhanced keeping qualities.

Method

1. Place ingredients into bread pan in the exact order listed in the recipe.
 2. Wipe spills from outside of bread pan.
 3. Insert the bread pan into position in the baking chamber and close the lid.

The perfect piece of toast needs a perfect cup of tea.

Green Tea
Herbal Tea - 80°C

White Tea - 85°C

Oolong Tea - 90°C

Black Tea - 100°C

Apart from the herbal varieties, there are four main types of tea, all from the same plant, just picked and processed in different ways.

Green tea is picked, rolled and dried before the leaves go brown giving it a distinctive aroma and taste. White tea comes from the buds of the plant that are then steamed and left to dry naturally which makes it taste sweeter.

Oolong tea is allowed to semi ferment and then processed

immediately giving it a delicate, fruity taste. Black tea is made by fermenting the harvested leaves for a few hours before heating or drying them, giving it the strongest flavour and colour.

TIP

If you brew too hot, the bitter flavours over power the tea. Conversely, if you brew too cold you don't release enough flavour from the leaves. The right balance is all about the right temperature.

Whole Wheat Bread

The breads in this section use ingredients such as wholemeal flour, rye flour and other grains or cereals. The WHOLE WHEAT setting has been designed with these ingredients in mind, by providing a 30 minute PREHEAT time at the beginning of the setting to allow these heavy flours time to absorb the liquid, soften and expand. The WHOLE WHEAT RAPID setting has a 5 minute PREHEAT time. Extra kneading and rising times have also been included. These features encourage better gluten development to produce a better wholemeal loaf of bread.

Almost any WHOLE WHEAT recipe, including the ones on the following pages, can be modified for use with the WHOLE WHEAT RAPID setting. Best results are achieved by using the longer settings, producing a loaf with optimal texture. If using the RAPID settings on specified recipes in this section, reduce salt by $\frac{1}{4}$ teaspoon and increase yeast by $\frac{1}{4}$ teaspoon. This adjustment is suitable for all recipes. For this reason, instant yeast (also known as quick-rise yeast, rapid-rise yeast, fast-rising yeast, fast-acting yeast or bread machine yeast) must be used with this setting or the bread will not rise and bake properly. Active dry yeast can be replaced with an equal or larger amount of instant yeast. Through a fermentation process, yeast produces carbon dioxide gas necessary to make bread rise. Yeast feeds on carbohydrates in sugar and flour to produce this gas and requires liquid and warmth to activate. We recommend using Active Dry Yeast for the standard settings and Instant Yeast for the shorter BASIC RAPID and WHOLE WHEAT RAPID settings. Almost any recipe can be modified for use with the RAPID settings with an equal or larger amount of Instant Yeast.

As a general guide, when using the RAPID settings:

1.25kg loaf size = substitute active dry yeast for $3\frac{1}{2}$ teaspoons instant yeast

1kg loaf size = substitute active dry yeast for 3 teaspoons instant yeast

0.75kg loaf size = substitute active dry yeast for $2\frac{1}{2}$ teaspoons instant yeast

500g loaf size = substitute active dry yeast for 2 teaspoons instant yeast

“Tandaco” brand yeast (‘Active Dry Yeast’, ‘Quick Rise Yeast’ and ‘Bread Machine Yeast’) were used in the development of all yeasted recipes contained in this booklet. You can use any brand, however always ensure the liquid ingredients are 27°C (80°F) to ensure the yeast properly activates. Check the used by date, as stale yeast will prevent the bread from rising.

Whole Wheat Bread

We also recommend adding vital wheat gluten. Vital wheat gluten is manufactured from wheat flour that has been treated to remove most of the starch, leaving a flour with very high protein content. Adding vital wheat gluten can improve the structure, increase volume and lighten texture when using a low protein, all-purpose, whole wheat, rye or stone ground flour.

Bread improver is not essential, however it will help strengthen the crumb structure of the bread resulting in a loaf that is lighter in texture and higher in volume, more stable and with enhanced keeping qualities.

Method

1. Place ingredients into bread pan in the exact order listed in the recipe.
 2. Wipe spills from outside of bread pan.
 3. Insert the bread pan into position in the baking chamber and close the lid.
 4. Press SELECT to access the desired setting as listed in the recipes below.
 5. Press LOAF SIZE to 1000g or 750g setting if required.
 6. Press CRUST to select DARK, MEDIUM, LIGHT or RAPID if required.
 7. Press START | PAUSE to commence operation.
 8. At the end of the setting, press STOP.

Bread flour	300g
Yeast: active dry	2 teaspoons

Suggested fillings

- Sun-dried tomato pesto, roasted red, yellow and green peppers, marinated aubergine or sliced mushroom.
- Anchovy fillets, prawns, sliced salami, ham, bacon, turkey or chicken.
- Grated cheddar, mozzarella, parmesan or sliced camembert, brie or feta cheeses.

Handshaping procedure

1. Divide dough into 8 equal pieces. Roll each piece into a circle 15cm across.
2. Cover half of each circle with selected fillings, leaving a rim around the edge.
3. Brush edges with water, then fold the uncovered half over the covered half and seal the edges.
4. Place onto lightly greased baking trays. Use a sharp knife to make a small slit in the top of each calzone.
5. Bake in a preheated oven at 200°C for 15-20 minutes or until cooked and golden brown.

2. Place filling ingredients in a mixing bowl, mix well to combine.
3. Place teaspoons of filling 5cm apart over one of the pasta squares. Brush edges and between filling lightly with water and top with remaining pasta square. Press firmly between fillings and along edges and cut into squares using a pastry wheel. Sprinkle ravioli with a little flour.
4. Cook ravioli in boiling water (several at a time) in a large saucepan for 5 minutes, or until just tender. Drain well, then serve with your favourite pasta sauce.

Gluten-free

Your Custom Loaf Pro will make delicious gluten-free bread with ease. The following recipes have been developed without any grains or ingredients that contain gluten, so are suitable for people with specific food allergies or intolerances.

Making gluten-free bread is different from traditional bread making, therefore it is important to carefully read the following information.

Always see the ingredients specified in recipes for successful gluten-free baking. Ensure that the flour is gluten-free. Buy it from a reliable source to ensure freshness. Check with the yeast manufacturer to ensure that the yeast is gluten-free. Only use active dry yeast when making these recipes.

Ensure that the vinegar used is gluten-free. Vinegar helps strengthen the dough.

Guar Gum is a powdery substance with a similar function to Xanthan Gum. It is high in fibre and can sometimes have a laxative effect on people with sensitive digestive systems. Guar gum is food additive 412.

Xanthan Gum is a fine creamy white powder, and acts as a substitute for gluten and gives structure to the bread so that the dough will rise. Xanthan Gum is food additive number 415.

Lactose intolerance – the milk powder may be substituted with a soy milk powder but may result in a heavier loaf. Coconut milk powder can also be used as a substitute and will give a pleasant flavour.

Follow the directions for each recipe carefully. The preparation of gluten-free bread is different from automatic bread making. The preset timer cannot be used when making these recipes.

NOTE

- Dough should resemble a thick batter. If necessary add 1-2 tablespoons of rice flour or water.
- For best results remove bread pan as soon as cycle has finished.

Gluten-free

Method

1. Follow steps for preparation on each recipe.
 2. Insert the bread pan into position in the baking chamber and close the lid.
 3. Press MENU to choose setting Gluten-free (8).
 4. Choose LOAF SIZE 1kg.
 5. Choose CRUST COLOUR DARK for best results.
 6. Press START | CANCEL to commence cycle.
 7. When the beeper alerts you that the fruit and nut dispenser has dispensed open lid - DO NOT turn bread maker off; use a plastic spatula and carefully scrape down sides of tin, mix in the same direction as the blade turning until ingredients are well combined, replace lid and continue with cycle.
 8. After cycle has completed press START | CANCEL to stop KEEP WARM setting.
 9. Using oven mitts, remove bread from bread maker. Allow bread to rest in pan for 5 minutes before turning out to cool on a wire rack.

Yeast-free

Yeast-free bread is a simple bread and is made using baking powder as the main raising agent (it does not have to be the same strength as yeast). The following recipes will give damper or muffin-style breads, which will be heavier in texture and not as highly risen as yeasted breads.

The preset timer cannot be used for recipes in this section, because the raising agents used in place of yeast could be prematurely activated and prevent the loaf rising.

All ingredients must be at room temperature. Add ingredients in the order listed in the recipe.

Method

1. Add liquid ingredients to bread pan.
 2. Sift dry ingredients together and add to the bread pan. Wipe spills from the outside of the bread pan. Insert bread pan into baking chamber.
 3. Press SELECT to access YEAST FREE setting.
 4. Press START | PAUSE to commence operation.
 5. With machine running, use a plastic spatula to scrape mixture from sides, corners and base of bread pan. After ingredients have mixed together well, close lid and leave the bread machine to complete the program.
 6. At the end of the setting, press STOP.
 7. Remove bread from the bread machine and bread pan. Cool bread on rack.

Jam & Glaze

If you love the taste of freshly baked bread you'll love the taste and flavour of home-made jam using the Sage Custom Loaf Pro.

For Best Results:

- Always use the exact amounts of sugar, fruits and pectin (Whitworths or Tate & Lyle). Do not reduce sugar or use substitutes.
- Use only fresh, ripe fruit for best flavour and natural pectin level.
- Remove stems, seeds or pips from fruit before slicing.
- Fruit can be chopped with a food processor, using a pulse action.
- Do not puree fruit. Jam should contain small pieces of fruit.
- Recipes should not exceed 4 cups. Weigh fruit after slicing.
- The gel, texture, flavour, aroma and colour of the cooled jam may vary when compared to commercially made jams. The natural pectin, ripeness, juiciness, etc. of the fruit used will influence the finished product.
- Due to the natural pectin of some fruits, if the jam appears to be thickening before the total cooking time has elapsed and no further cooking is required, press the STOP button then complete the bottling process.
- Pectin is a naturally occurring substance found in fresh fruit and when cooked produces a gel. The amount pectin required to set a jam varies depending on the ripeness of the fruit used. Riper fruit contains more natural pectin, and will set more readily. The sachet contains 8 grams, and you may need to use less.
- The preset timer cannot be used for jam recipes.

Jam & Glaze

Method

1. With the jam mixing blade in position inside the bread pan, add the ingredients to the bread pan.
2. Wipe spills away from the outside of the bread pan.
3. Insert bread pan into position inside the baking chamber and close the lid. Do not use the collapsible kneading blade when making jam.
4. Press SELECT to access the JAM setting.
5. Press START | PAUSE to commence operation. The bread machine will preheat (LCD Screen will show PREHEAT) for 15 minutes before any movement occurs in the pan. After preheating, the jam will be heated and mixed for approximately 50 minutes (LCD Screen will show BAKE). The entire setting takes 1 hour 05 minutes. The bread machine will beep when the setting is complete.
6. Press STOP.
7. Use oven mitts to remove the bread pan.
8. Pour the hot jam into warm, dry, sterilised jars, leaving 1.25cm, from the top of the jar. Seal immediately and label. Jam will thicken upon cooling and storage.

Preparation of Jars for Jam

Wash jars and lids in hot, soapy water. Rinse well in hot water. Place jars and lids into a large saucepan and fill with water to cover. Bring water to the boil and boil for 5 minutes. Remove from heat. Carefully transfer jars and lids onto an oven tray. Place into a preheated oven 100°C for 15-20 minutes or until completely dry. Remove from oven using oven mitts and use immediately.

It is important that these recipes are measured accurately otherwise the ingredients may boil over, making cleaning difficult.
